

Body Deffloculant

PHYSICAL AND CHEMICAL PROPERTIES

Chemical Nature:	Inorganic and organic polyelectrolyte's mixture
Aspect:	Yellowish transparent liquid
Solubility:	Complete

PRODUCT DESCRIPTION AND USE

It is an effective liquid deffloculant for ceramic slips. This additive allows to disperse the particles achieving a value of viscosity stable and hence allows higher solids content. The effectiveness of this deffloculant is due to the synergy obtained by combining inorganic and organic deffloculants

Its liquid state allows a fast and good mixing.

The recommended percentage is 0.2-0.7%.

PRESENTATION AND INDICATIONS

Closed drums of 125 Kg. and tanks of 1000Kg

It is advisable to avoid direct exposition of the product to sunbeams and heat sources
